Customer Reviews

I ordered two different venus trap kits. There were 4 tiny seeds in each of them. Out of the four seeds in this kit only one germinated... it has been 4 weeks now since we planted it with my son and we are waiting for it to mature in order to transfer it to a bigger pot. I agree with the other reviewers who wished that the booklet could include diagrams or at least images of the stages of the plant so that we would know what to expect in those stages. No seeds germinated from the other kit I ordered so this kit is ok I guess. But I wish there were more than 4 seeds... this would increase the chance of germination from 25% up.

Informative. If you are going to grow carnivorous plants, this guide will help.

Is still alive but was not treated very well by the post office. When it arrived it looked like it had been thru a war zone and had to be totally put back together. Will see how it recovers over the next several weeks.

Hopefully my next plant will not die after reading this little booklet. A few more illustrations would be helpful though !
