Hydroponics is something that means growing plants without soil, and it has been pretty popular lately. It has been around for a very long time, reminds on garden of Babylon, that has been studied a lot by scientists. All plants require air, light and nutrient to grow, good thing is that nutrient is dissolved in water and it can be precisely controlled. Book starts with little history and some basic principles. It can be put into your back garden, and there are also very small units that can be put into kitchen. There are different hydroponics system like the drip system, ebb and flow system, water culture system, aeroponics..No matter which system is used, there is always a chance that you will always run into problems with pests and diseases like spider mites, aphids, thrips..Nice and detailed guide, specially for beginners like myself, who would like to grow the plants and enjoy benefits.
